

Sample Connect app

5 modules and 4 platform items · prepared by Winnow Tools · 2026-10-05

Straightforward, with a few caveats noted below.

7

move as-is

2

with caveats or in Preview

0

no Forge equivalent

0

to check manually

Two ways to get there

1 · Connect on Forge first

Wrap the current app in a Forge app (`connectModules`) and declare the migration with `core:connectToForgeMigration` . Your backend and screens stay as they are. A stepping stone, not the end state: the Connect modules inside still need to be replaced.

10–20 h
\$450–\$900 at \$45/h

2 · Full migration to Forge

Every module replaced by its Forge equivalent, screens bundled into Forge, backend calls through Forge Remote or moved into Forge functions. Nothing left on Connect.

37–87 h
\$1,650–\$3,900 at \$45/h

Module by module

CONNECT	FORGE	STATUS	ESTIMATE
<code>webSections</code>	<code>grouping only – no module needed</code>	Moves as-is	1–1 h
<code>adminPages</code>	<code>jira:adminPage / confluence:globalSettings</code>	Moves as-is	4–12 h
<code>jiraProjectPages</code>	<code>jira:projectPage</code>	Moves as-is	4–12 h
<code>jiraEntityProperties</code>	<code>jira:entityProperty</code>	Moves as-is	1–3 h
<code>dialogs</code>	<code>Modal (UI Kit or Custom UI)</code>	Moves as-is	2–6 h

Platform

AREA	FORGE	STATUS	ESTIMATE
Install / enable events	<code>avi:forge:installed:app,</code> <code>avi:forge:upgraded:app</code>	Moves as-is	2–4 h
Uninstall event	—	Moves with caveats No direct Forge equivalent yet (FRGE-1246). A small change: cleanup moves to data-retention handling.	2–6 h
Backend authentication (Connect JWT)	Forge Remote (keep your backend) or Forge functions	Moves with caveats Calls to the backend move from Connect JWT to Forge Remote tokens; UIs are bundled into Forge instead of being served from your server.	8–20 h
Scopes: READ, WRITE, DELETE, PROJECT_ADMIN	Granular Forge scopes	Moves as-is	1–3 h

How the estimate is built

Modules	12–34 h
Platform: lifecycle, authentication, scopes	13–33 h
Forge app setup, manifest, migration declaration	6–10 h
Testing and staged release (development → test site → production)	6–10 h
Full migration	37–87 h

What this estimate cannot see

- The size of your backend. If it stays where it is behind Forge Remote, the platform line above covers it; if it moves into Forge functions, that is quoted separately after a code review.
- How much data has to move — app properties, custom field values, macro bodies.
- Whether the source code is available. Without it, screens are rebuilt from scratch and the module estimates move toward the upper bound.

We turn this into a fixed price after a short look at the code — usually within two business days.
